

SYSTEM, METHOD AND COMPUTER PROGRAM PRODUCT FOR ORDER CONFIRMATION IN A SUPPLY CHAIN MANAGEMENT FRAMEWORK

5

ABSTRACT

A system, method and computer program product are disclosed for order confirmation in a supply chain management framework. A network is utilized to collect from a plurality of stores of a supply chain data relating to the sale of goods by the stores. Access is
10 allowed to the data utilizing a network-based interface. Electronic order forms are generated based on the data for ordering goods from a plurality of distributors of the supply chain. These electronic order forms request a confirmation of the receipt of the electronic order forms. A determination is made as to whether the confirmation of the
15 receipt of the electronic order forms is received from the distributors. If it is determined that the confirmation of the receipt of the electronic order forms was not from the distributors, then an alert is generated.
